

Logistics Barometer

The effect of COVID-19 on logistic activities

22 May 2020 | Base Logistics keeps a close eye on the logistical situation in Europe, whereby we can draw on the large amount of data that our own logistics application Klairy provides us. Our Logistics Barometer is our interpretation of these figures and is published weekly.

In a 'regular' year, the months of April and May can show capricious statistics due to a number of holidays. Having no global public holidays, this week turned out to be a relatively good week in many countries. However, COVID-19 still has a grip on a number of other countries. Therefore, we are zooming in on some of these countries to see what is happening there.

Belgium

Although the Belgian index is getting closer to the average of 2020's start, it showed a minor fall last week. This puts the country in the company of 30% of the countries within Europe. Reaching 89 this week, Belgium's index is a bit higher than the European index.

France

After 3 weeks of decline, France's index finally picked up a positive direction again. Having reached an index as low as 65, the country is now above the level of 4 weeks ago. This is consistent with the fact that there are virtually no logistical restrictions in France anymore.

United Kingdom

For four weeks in a row, the numbers in the United Kingdom had shown an impressive increase, until this week. Having reached an index above 100, the country has now gone back to 95. Which is still relatively high compared to the European index.

Austria

Belgium

Czech Republic

France

Germany

Italy

Netherlands

Poland

Spain

Sweden

Switzerland

United Kingdom

■ AV = Weekly average level of activities (weeks 2-7 2020, N=70,265).
 ■ 17-20 = Weekly index (week 17-20) based on weekly average.

Trends in Europe

The stats shown zoom into logistic activities of the Netherlands and its top 11 largest business partners. Unlike last week, nearly 65% of the countries in Europe showed an increase in the number of activities. The upward movement of the index slowly continues. In 26% of the European countries the index is now above 100, which is the same percentage as last week.

Klairy Clarifies more... Data is extracted from Klairy, the smart logistics application developed by Base Logistics. Through Klairy, Base Logistics collects valuable logistics data from across the globe every day.
